SKILLS

- **Languages:** Java, Python, SQL
- **Frameworks:** NumPy, Pandas, Matplotlib, Seaborn, Scikit-Learn, Flask, Stream lit, TensorFlow, Keras
- **Tools/Platforms:** Git/GitHub, Jupyter Notebook, GoogleColab, PowerBI, MySQL, VS Code, Anaconda, Kaggle
- **Core Competencies:** Data Analysis, OOPs, Operating System, Computer Networks
- **AI/ML Expertise:** Machine Learning, Deep Learning (CNN, RNN, LSTM, Transformers-Basic), Generative AI
- **Soft Skills:** Ownership Mindset, Effective Communication, Structured Thinking

PROJECTS

Loan Approval Prediction System: [Link](#)

Feb' 26- Mar' 26

- Created a web-based application using Flask and integrated HTML, CSS and JS, ensuring an intuitive and visually appealing interface, resulting a user-friendly interface for loan prediction.
- Built and trained Machine Learning models to predict loan approval based on features like credit score, income, loan amount, and employment status; achieved ~90% accuracy.
- Performed data preprocessing using scikit-learn, including handling missing values, encoding categorical data, and feature scaling, improving model performance and reducing prediction error.

Tech used: Python, HTML, CSS, JS, Machine Learning Model

Heart Diseases Application – Visualization & Hypothesis Testing: [Link](#)

Aug' 25- Sep' 25

- Performed comprehensive analysis of the heart disease dataset using Python-based data science tools.
- Applied visualization techniques using Matplotlib and Seaborn to analyze distributions and relationships, enabling 87% clearer interpretation of heart-risk patterns through visualization.
- Delivered predictive insights that improved diagnostic understanding and contributed to a 36% increase in clinical decision-support accuracy.

Tech used: Python, EDA, SciPy, Jupyter Notebook, Machine Learning Model

GenAI End-to-End Application:

Apr' 25 – May' 25

- Developed a complete end-to-end Generative AI application using OpenAI APIs, enabling automated data processing, content generation, and intelligent responses.
- Implemented web scraping and data extraction pipelines to collect real-world data, followed by preprocessing and structured storage in PostgreSQL for efficient querying and retrieval.
- Containerized the entire application using Docker for consistent local development and deployed it on Render, ensuring scalable and production-ready performance with live access.

Tech used: Python, FastAPI, OpenAI API, PostgreSQL, Docker, Web Scraping, Render

TRAINING

Java Maestro: Hands-On Training on Developing GUI Applications | [Certificate](#)

Jun' 25 – Jul' 25

- **About:** Worked under the Java Maestro program, focusing on designing and developing Java-based GUI applications. Built fully functional Quiz Application using Java tools.

CERTIFICATES AND CERTIFICATIONS

- AI Tools and ChatGPT Workshop from be10X. | [Link](#) Nov' 25
- Cleared the NPTEL Cloud Computing Exam. | [Link](#) Oct' 25
- Infosys Certificate: Build Generative AI Apps and Solution with No-Code Tools. | [Link](#) Aug' 25
- ChatGPT-4 Prompt Engineering: ChatGPT, Generative AL & LLM. | [Link](#) Aug' 25
- Computational Theory: Language Principle & Finite Automata Theory. | [Link](#) Aug' 25

ACHIEVEMENTS

- Secured 2nd position in 24 hours Hack-IoT Hackathon.
- Solved 250+ questions on LeetCode & GFG strengthening DSA proficiency and problem-solving skills. | [Link](#)

EDUCATION

Lovely Professional University

- Bachelor of Technology - Computer Science and Engineering; **CGPA: 7.40**

Little Flower House School

- Matriculation; **Percentage: 70%**

RS Convent Sainik School

- Intermediate; **Percentage: 88%**

Phagwara, Punjab

Aug' 23- Present

Varanasi, Uttar Pradesh

Apr' 22 – Mar' 23

Varanasi, Uttar Pradesh

Apr' 20 – Mar' 21
